To Whom It May Concern

Our company has bought 2 kits of “**Microlon Anti-Friction**” products; one being for a Proton Jumbuck Utility which uses unleaded petrol; the other being for our Hino 2tonne turbo-diesel delivery truck.

Our **fuel bills are monitored easily** because we receive a **detailed account** from our fuel provider.

Both vehicles have shown a **marked improvement** in litres used per 100km **after** the engines were treated with “**Microlon**”. Also this improvement has been ongoing and both vehicles are now **using less oil** than before the treatment.

This treatment is **only done once** in the life of the engine & thus is **most cost effective**.

I have **no hesitation in recommending** these products which are made in the USA & distributed by JPYN Enterprises throughout Australia.
