

## TO WHOM IT MAY CONCERN

I am the owner of a 2002 VX Holden Commodore Equipe which I bought new. In late 2002, along with my golf clubs, I travelled to the Murray River region for a week of golf. I was extremely pleased with the economy of my car getting around 630 kilometres on a tank of fuel (64 litres).

In late 2007 I was introduced to Microlon fuel and oil additive by Jean-Pierre Brochard. Being a little sceptical I purchased a kit for my car. After the next service at 60000 kilometres I added the Microlon products as per Jean-Pierre's instructions.

On Anzac day 2008 I was called to Melbourne on family matters. Imagine my surprise when I obtained 775 kilometres on a tank of unleaded petrol (63 litres). That is from Moss Vale to Dandenong on one tank of fuel. INCREDIBLE.

Two weeks later the same trip was taken – down the Hume Highway and back along the Princes Highway. The last trip yielded 720 kilometres for 62 litres. This lower reading could be attributed to the winding roads in lower NSW coast line.

I have no hesitation on recommending Microlon products to anyone.
